- 1. "Only cardinals can aquitate" would be falsified by:
 - A. A cardinal who cannot aquitate
 - B. A non-cardinal who can aquitate
 - C. Either of the above
 - **D.** None of the above
- 2. Ignore everything you know, and assume the following statements are true: everything with four legs is a mammal; lizards have four legs; people have two legs. Under these assumptions, you can conclude:
 - A. lizards are mammals
 - **B.** people are not mammals
 - C. both of the above
 - **D.** none of the above

Use the following information for the next three questions. A natural area in Africa that didn't used to have leopards now has leopards hunting the gazelles. Researchers believe that the gazelles are now evolving to run faster.

- **3.** This would be an example of
 - A. Acclimation
 - **B.** Directional selection
 - C. Disruptive selection
 - **D.** Inheritance of acquired traits
 - E. Stabilizing selection
- **4.** Compared to situations where evolution is causing less change, this situation is likely to lead to relatively more ______ selection on *rare alleles*.
 - A. balancing
 - **B.** frequency-dependent
 - C. negative
 - **D.** positive
- 5. If the leopards remain for a long time, we would expect gazelle speed to increase to a well-adapted level, after which it would likely be subject to
 - A. Acclimation
 - **B.** Directional selection
 - C. Disruptive selection
 - **D.** Inheritance of acquired traits
 - E. Stabilizing selection

Use the following information for the next two questions. A new population that arises by polyploidy is generally less likely to lead to species divergence than one that arises by vicariance.

 A. Competition B. Disruptive selection C. Gene flow D. Genetic drift 	
7. A reason that is likely work in the opposite direction is	
 A. Competition B. Disruptive selection C. Gene flow D. Genetic drift 	
8. Vestigial structures like the human tailbone provide evidence that evolution is;	
 A. based on the inheritance of acquired characteristics B. driven by natural selection C. goal directed D. history-dependent 	
9. According to the paradigm of science shared in class, the experiment that show that bacteria grow after boiling in regular flasks, but not in swan-necked flasks, show be seen as a test of whether the experiment would the theo	uld
 A. falsify; cell B. falsify; spontaneous generation C. prove; cell D. prove; spontaneous generation 	
10. Which of the following is the <i>least</i> likely reason to prefer an observational stute to an experimental study?: The proposed experimental study is	ıdy
 A. not convincing B. not ethical C. not possible D. not practical 	

11. Two	children	are born in	Kenya to	Kenyan	parents.	One i	noves to	Canada	as an
infant.	The child	raised in (Canada is	able to	function	better	in cold	weather.	This
scenario	describes		_ differenc	es that a	are direct	ly due	to	•	

- A. genotypic; acclimation
- B. phenotypic; acclimation
- C. genotypic; adaptation
- **D.** phenotypic; adaptation
- 12. A researcher believes that apple-raised hawthorn flies are more likely to mate with apple-raised flies, and hawthorn-raised flies are more likely to mate with hawthorn-raised flies. This idea would be supported if they look at genes related to feeding in a population containing both types and found evidence that the population:
 - A. is in Hardy-Weinberg equilibrium
 - **B.** is *not* in Hardy-Weinberg equilibrium
 - C. has more homozygotes than expected by the Hardy-Weinberg distribution
 - D. has fewer homozygotes than expected by the Hardy-Weinberg distribution
- **13.** Frequency-dependent selection at the trait level is generally associated with ______ selection at the allele level.
 - A. balancing
 - B. directional
 - C. disruptive
 - **D.** negative
 - E. positive
- **14.** Under genetic drift, the frequency of a given allele has a tendency to _____ unless it reaches a of 0 or 1.
- **A.** jump around in each generation with no dependence on the frequency of the previous generation
 - **B.** move gradually in either direction in any given generation
 - C. move in the same direction it has been moving
 - **D.** move towards balance with other alleles

15. In a population of zebras, researchers observe that: some zebras run faster than others, and that fast zebra tend to survive better and have more offspring on average. To show that natural selection for speed is operating in this population, the researchers still have to ______.

- **A.** Find the genetic basis for these differences
- **B.** Show that fast-running zebras on average have higher fitness than other zebras
- C. Show that running fast is heritable in this population
- **D.** Show that fast-running zebras are more attractive to mates
- **E.** None of the above, their described observations are sufficient.
- **16.** Which of the following is *not* one of the logical steps underlying the theory of natural selection?
 - A. Differential success linked to traits
 - **B.** Dominant and recessive traits
 - C. Heritability of traits
 - **D.** Variation in traits
- 17. Which of the following provides the best evidence for adaptation via natural selection as opposed to inheritance of acquired characteristics?
 - A. Evolution of very fast antelope
 - B. Geographic patterns of related species
 - C. Patterns of homologies
 - **D.** Results of laboratory-based evolution experiments.
- **18.** We define a "biological island" as an area that is isolated . . .
 - **A.** by water
 - **B.** by inhospitable habitat
 - C. from the point of view of all of the species that live there
 - **D.** from the point of view of a particular species of interest
- 19. Species divergence is ______ likely to happen in sympatry than in allopatry, in part because the effects of _____ are usually greater in sympatry
 - A. less; gene flow
 - **B.** less; genetic drift
 - C. more; gene flow
 - **D.** more; genetic drift

20. When the Central American land bridge linked up to separate the Pacific Ocean from the Caribbean Sea about 3 million years ago, this represented a event for ocean fish, and a event for monkeys.
 A. reunification; reunification B. reunification; vicariance C. vicariance; reunification D. vicariance; vicariance
21. Male, but not female, elk, have heavy antlers that are used primarily in sexual competition. This is likely an adaptive response due to the fact that maximum reproductive output.
A. females; lowerB. females; higherC. males; lowerD. males; higher
 22. The primary source of new alleles is A. gene flow B. genetic drift C. mutations D. natural selection E. sex
23. Eastern and western meadowlarks look very similar, but actively avoid breeding with each other. We believe that they are separate evolutionary units. This scenario illustrates a strength of the species concept and a weakness of the species concept.
 A. biological; ecological B. biological; morphological C. phylogenetic; ecological D. phylogenetic; morphological
Use the following information for the next two questions. Two populations of pine trees have occasional hybrid offspring that usually do not grow well. They also release (and accept) pollen (which carries the male reproductive cells to female reproductive cells) at different times of the year.

24.	1 is an example of and may	have a	arisen i	n response to
I (A. Different timing; pre-zygotic isolation; low hybrid f. B. Different timing; post-zygotic isolation; low hybrid C. Low hybrid fitness; pre-zygotic isolation; different t. D. Low hybrid fitness; post-zygotic isolation; different	fitness iming	S	
25 .	5. This scenario describes an example of			
I (A. ExclusionB. FusionC. PolyploidyD. Reinforcement			
	3. According to the paradigm of science shared in class, s God, and use religious texts as scientific ev		ts	believe
I (A. can; canB. can; cannotC. cannot; canD. cannot; cannot			
27.	7. Whale flippers and human hands have similar bone la because it is believed that it is caused by	•		s considered a
I (A. homology; adaptation B. homology; shared ancestry C. vestigial trait; adaptation D. vestigial trait; shared ancestry 			

- **28.** Which of the following is *not* an example of a tradeoff?
 - **A.** Brightly colored cardinals are attractive to potential mates and to predators
- ${f B.}$ Finches with heavier beaks can crack more seeds, and take longer to develop and reproduce
 - C. Humans are not well designed to be upright
 - **D.** Hawthorn flies that hatch early do well on apple trees but not on hawthorn trees

Use the following information for the next two questions. In a large flood many years ago, a large population of turkeys was split by a new river. About a quarter of the turkeys were isolated into a new, Northern population. In the same flood, a few turkeys were washed out to sea, and formed a new Island population.

29. We would say that formation of the North and formation of the Island population was a A. dispersal; dispersal B. dispersal; vicariance C. vicariance; dispersal D. vicariance; vicariance	
A. stronger; stronger B. stronger; weaker C. weaker; stronger D. weaker; weaker	1 1 1
Answer questions in pen. Be brief. 31. Tapirs are large mammals that look a bit horses. Temperate South America has many while tropical South America does not. Compare able to grow hair quickly when the weather gets warmer. a) (2 points) What part of this story describe	places that can get very cold weather, eared to tropical tapirs, temperate tapirs gets cold, and shed it when the weather
p) (2 points) What part of this story likely de	escribes adaptation, and why?

32. A population of peppered moths has two alleles for their primary color locus: a D allele, associated with dark-colored moths, and an L allele, associated with light-

colored moths. The population has 100 individuals, 20 D alleles, and 180 L alleles. The D allele is dominant with respect to the L allele.
a) (2 points) What are the allele frequencies in this population?
b) (2 points) What genotype frequencies would the Hardy-Weinberg assumptions predict for this population?
c) (1 point) What proportion of the moths would have dark appearance under this assumption?
d) (1 point) If the population has more homozygotes than expected under Hardy-Weinberg, would the proportion of dark moths go up or down?
